RESEARCH INTERESTS

I am passionate about studying the mechanisms driving species turnover across space and time, as well as exploring the factors that maintain biodiversity. I am particularly fascinated by the diverse outcome of resource consumption, species interactions, and species dispersal found in real ecological communities. I was trained as an ecologist in both observational and theoretical perspectives. I have joined multiple field surveys in subtropical montane forests in Taiwan, and have also studied theoretical frameworks in ecology. During PhD, I wish to expand my skills in developing theoretical frameworks and designing experiments to test my hypotheses. Additionally, I am also keen to explore a variety of ecological systems in my research.

EDUCATION

M.S., Institute of Ecology and Evolutionary Biology, National Taiwan University, Taipei, Taiwan 2020-2023

Thesis title: *"Disentangling ecological processes underlying the metacommunity by integrating several analytical methods"*; Advisors: David Zelený

B.S., Department of Mathematics, National Taiwan University, Taipei, Taiwan 2016-2020

SKILLS

Programming: R, Julia, L^AT_EX

Field work: forest overstory and understory census, functional trait collection and measurement

Numerical analysis: ordination, survival analysis

PUBLICATIONS AND CONFERENCES

Manuscripts

- **Huang, C.-L.**, Zelený, D., Chang-Yang, C.-H. Integrating several analytical methods to assess strength of ecological processes behind metacommunity assembly. (*in prep.*)

Conference

- **Huang, C.-L.**, Zelený, D. (2022) How well do available methods quantify the importance of assembly processes in ecological community data: a simulation approach. The 10th Biennial conference of the International Biogeography Society

WORKING EXPERIENCE

Research assistant

- Ke Lab, National Taiwan University PI: Po-Ju Ke pending

Part-time technical assistant

- Vegetation Ecology Lab, National Taiwan University PI: David Zelený 2021-2022

Teaching assistant

- Introduction to Theoretical Ecology Lecturer: Po-Ju Ke Fall 2022

- Numerical Methods in Community Ecology Lecturer: David Zelený Spring 2022

- General Botany Lab Lecturer: Fen-Ming Lee Fall 2021

- Introduction to R for Ecologists Lecturer: David Zelený Fall 2020

- Calculus Lecturer: Ya-Ju Tsai Fall 2019- Spring 2020

OTHER EXPERIENCE

Journal manuscript referee

- *Journal of Vegetation Science* (1 review)

Selected field survey experience

- | | |
|---|-------------|
| - Overstory and understory composition survey and leaf traits collection in fog frequency gradient transect | 2021-2022 |
| - Leaf trait collection, and seedling survey in Fushan Forest Dynamics Plot | 2019-2020 |
| - Tree census in Lalashan Forest Dynamics Plot | 2019-2020 |
| - Tree and seedling census in Kenting Forest Recreation Area | Summer 2019 |
| - Tree census in Fushan Forest Dynamics Plot | Winter 2019 |
